Finite-difference time-domain or Yee's method (named after the Chinese American applied mathematician Kane S. Yee, born 1934) is a numerical analysis technique used for modeling computational electrodynamics (finding approximate solutions to the associated system of differential equations). Since it is a time-domain method, FDTD solutions can cover a wide frequency range with a single ...

1.. Introduction In this paper we introduce a new method for the analysis of problems governed by partial differential equations such as, for example, solids, structures and fluids.

The paper presents a Finite Element Analysis (FEA) based efficient analysis procedure for permanent magnet synchronous motor (PMSM). The study based on finite element models (FEM) offers much more information on the phenomena characterizing the operation of electrical machines than the classical analytical models.

The paper reviews the application of deterministic-stochastic models in some areas of computational electromagnetics. Namely, in certain problems there is an uncertainty in the input data set as some properties of a system are partly or entirely unknown. Thus, a simple stochastic collocation (SC) method is used to determine relevant statistics about given responses.

In matematica, il metodo degli elementi finiti (FEM, dall'inglese Finite Element Method) è una tecnica numerica atta a cercare soluzioni approssimate di problemi descritti da equazioni differenziali alle derivate parziali riducendo queste ultime ad un sistema di equazioni algebriche.. Benchè esso competa in alcuni ambiti limitati con altre strategie numeriche (metodo delle differenze finite ...
